GRASS SEEDS

**PHONE
CL 3812
CH 0439**

The FALL is an ideal time for preparing your lawn and sowing grass seed. This is especially true in the case of shady locations. By sowing the seed in the FALL you give the grass a chance to get started and well rooted when the vitality of the surrounding trees is declining. All the grasses listed below may be sown anytime beginning Sept. 1st.

LOSE'S SURE CROP LAWN GRASS—This grass is a carefully blended mixture of high grade Bluegrass, Red Top, Rye Grass, Red Creeping fescue and Dutch White Clover, designed to give you the best lawn, in the quickest time, and under most weather conditions. Ideal for making a quick, permanent, deep green and velvety lawn. 85c lb., 5 lbs. \$4.15, 10 lbs. \$8.00, 20 lbs. \$15.75.

LOSE'S SURE CROP SHADY LAWN—A carefully blended mixture of grasses especially adapted to growing in shady spots, under trees, or on the shady side of the house. Since trees take a lot of plant food out of the soil it is especially important that you work in at least 4 lbs. of Vigoro, or 6 lbs. of Sheep Manure per 100 sq. ft., and water frequently in the summer. Fall sowing of this seed enables the grass to get a good start while the trees are dormant. 85c lb., 5 lbs. \$4.15, 10 lbs. \$8.00, 20 lbs. \$15.75.

KENTUCKY BLUE GRASS—King of Grasses—Unequalled for making a beautiful thick compact turf when conditions are favorable. Germination is slow, and if quick lawn is desired should be sown along with faster germinating grasses. Blue grass prefers soil of high fertility, so if your ground is poor

be sure to use fertilizer or manure. 95c lb., 5 lbs., \$4.65, 10 lbs. \$9.00, 20 lbs. \$17.75.

LOSE'S WINTER GRASS—This mixture of grasses is especially adapted to giving a quick, thick, deep green coverage for the winter. It is just as satisfactory for shady locations as open places. 45c lb., 5 lbs. \$2.10, 20 lbs. \$8.00.

RYE GRASS—Unexcelled for rapid growth and immediate effect. Does not make a permanent lawn unless mixed with other grasses. Excellent to give a beautiful green effect all winter. 25c lb., 5 lbs. \$1.15, 10 lbs. \$2.00, 20 lbs. \$3.90.

PERENNIAL RYE GRASS—The somewhat darker green finer blade makes the perennial rye grass more desirable for lawns than the domestic rye grass. Very quick growing. 35c lb., 5 lbs. \$1.65, 10 lbs. \$3.00, 20 lbs. \$5.90.

DUTCH WHITE CLOVER—A perennial clover used extensively for lawns in a mixture. \$1.50 lb.

POA TRIVIALIS—Also known as Rough Stalk Meadow Grass or Blue Grass of the Shade, since it is particularly adapted to shady places. Does not withstand drought as well as Blue Grass, so its ideal location would be a moist shady spot. \$1.25 lb., 5 lbs. \$6.00, 10 lbs. \$11.50.

CREEPING RED FESCUE—Excellent for shade. Thrives on all types of soil, even dry sandy bottom soil. Makes an extremely tight sod of fine needle-like deep green leaves. It is not easily winter-killed and is ideal for use on lawns, golf courses, airports, cemeteries, and playgrounds. 85c lb., 5 lbs. \$4.00, 10 lbs. \$7.50, 20 lbs. \$20.00.

MERION (B-27) BLUEGRASS

Merion Bluegrass began as a single plant which developed from one of millions of bluegrass seeds which had been sown over the years at the Merion Golf Club at Ardmore, Pennsylvania. After years of testing, there is no longer any doubt that for lawn purposes, Merion is truly superior to any Bluegrass previously produced.

It has been proven that, side by side, with common bluegrass, and under identical conditions, it will have less crabgrass. Merion builds a closer knitted cushion of turf under close mowing than regular bluegrass. With Merion Bluegrass there will be fewer weeds, fewer mowings needed, and less waterings. The rate of sowing Merion Bluegrass is 1 lb. per 750 to 1,000 sq. ft. Therefore you will find that the cost per 1000 sq. ft. even at today's high price per pound of Merion is about the same as for common bluegrass and the results are far superior and more permanent under cost condition.

SEEDING — Approximately 3 lbs. per 1000 sq. ft. of lawn is the recommended rate of sowing. Fertilizing before sowing the seed and watering afterwards is important. The ground must not be permitted to dry out until after the seed is up.

FERTILIZING — A complete fertilizer such as Vertagreen or Vigoro, or an organic fertilizer such as Sheep manure should be applied twice yearly, Spring and Fall. A heavy watering after fertilizing is a good, and sometimes absolutely necessary practice.

WATERING — Early morning waterings are more desirable than evening, especially in cases of bent or fescue lawns which are susceptible to lawn diseases. Infrequent heavy waterings are more beneficial than frequent shallow ones.

LOSE BROTHERS' YOUNG - FRESH DUG EVERGREENS
